

WHY NAVIX FOR YOUR PORTABLE NUCLEAR CARDIOLOGY SERVICE?

1. Portable Nuclear Cardiology (automation, accreditation & economics)

Navix provides nuclear cardiology services that "roll-in" and "roll-out" to provide services for your patients on the days you need. Whether you require a fixed or portable solution, Navix provides equipment, staffing and complete management of all radiopharmaceutical needs including isotopes, stress agents, federal & state regulatory compliance and licensing requirements. We also provide radiation safety oversight including record keeping, health physics, inspections and quality assurance programs.

ICANL accreditation is achieved on behalf of Navix clients for the nuclear cardiology lab. The process often requires 1,000+ hours for initial accreditation. A client physician is typically named as medical director and Navix nuclear technologist as the lab's technical director.

While the accreditation for nuclear cardiology remains a voluntary process, several payors have enacted policies requiring ICANL Accreditation as a means to ensure quality. For more information, see www.icanl.org on the web.

2. Clinical Expertise (clinical protocols, education & research)

Navix provides nuclear myocardial imaging to help cardiologists improve the quality and efficiency of their practices. Certified technologists deliver cardiac imaging protocols to provide the flexibility to address the many needs of patients requiring early detection and management of heart disease.

We only hire the best. A passion for patient care is a pre-requisite for employment. Navix Technologists receive extensive pre-hire testing and ongoing training to assure clinical proficiency. Clinical management provides on-site supervision and mentoring at client sites.

3. FIND more at-risk individuals

Navix markets to and educates referring physicians on the awareness and benefit of the client's nuclear cardiology lab. A marketing program is developed with the client, incorporating elements ranging from direct marketing to telemarketing efforts followed up with face-to-face field marketing visits to referring physician offices.
